9. Spiral fold model into shape.

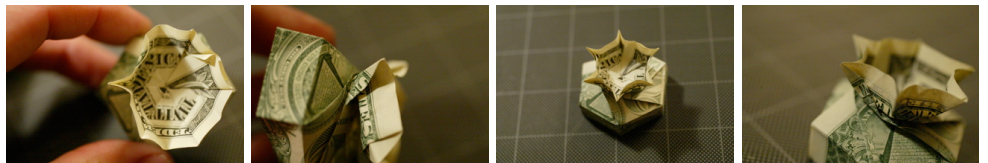

*If you're really good with your fingers, you can spiral fold from the rolled up stage. I find it easier to spiral fold while the model is open. Make sure the final folds wind up on top of the model. They will naturally want to be on the bottom. The bottom row of photos show how to tuck the end flaps together.*

10. Valley each edge to center, unfold.

*Note that the model has been rotated from the first photo to the second. Fold the flat edge to the center.*
